Sawmill Mechanic / Diesel Mechanic

Meisters Forest Products and Meister Trucking are looking for an experienced, dependable mechanic to join our team. This position will focus on keeping our company-owned trucks, trailers, equipment, and sawmill machinery maintained, repaired, and ready to work.

Rather than sending routine maintenance and repairs to an outside shop, we're looking for someone who can handle our in-house maintenance needs and help keep our operation moving.

What You'll Do

- Perform routine maintenance and repairs on company trucks, trailers, and sawmill equipment
- Diagnose and repair diesel engine, electrical, brake, suspension, and other mechanical issues
- Complete oil changes, fluid services, filter changes, and preventative maintenance
- Inspect trucks and equipment to identify potential problems before they lead to downtime
- Maintain and repair sawmill equipment as needed
- Perform basic fabrication, welding, and mechanical repairs when applicable
- Keep accurate records of maintenance and completed repairs
- Maintain an organized, safe, and functional work area
- Coordinate parts and supplies needed for repairs and maintenance
- Help prioritize repairs based on operational needs
- Assist with unexpected breakdowns involving both trucks and sawmill equipment

What We're Looking For

We're looking for someone who is mechanically skilled, self-motivated, and comfortable working independently. The right person can identify what needs to be done, troubleshoot the problem, and take the initiative to get it fixed.

Diesel and heavy truck experience is strongly preferred. Sawmill or heavy equipment experience is a plus.

Applicants should have:

- Experience with diesel truck maintenance and repair
- Strong mechanical and troubleshooting skills
- Knowledge of preventative maintenance practices
- The ability to work independently and manage maintenance priorities
- A valid driver's license and reliable work history

Welding and fabrication experience, knowledge of hydraulic systems and components, sawmill experience, and experience with 480 volt electrical systems are all pluses. A CDL is a plus but is not required unless otherwise specified.

In-House Maintenance

You will be maintaining equipment for our own operation and will have the opportunity to become familiar with the trucks and sawmill equipment you work on.

Benefits

This position receives the same employee benefits offered through Meisters Forest Products, including the company's current benefits package. Additional details about compensation, schedule, and benefits will be discussed during the hiring process.

A company vehicle may be available depending on the candidate and position needs.

Join the Meisters Team

If you're an experienced mechanic looking for steady, in-house work helping keep a local trucking and sawmill operation running, we'd like to hear from you. Apply today to learn more about the Sawmill Mechanic / Diesel Mechanic position with Meisters Forest Products and Meister Trucking.
